VEGETABLE PATCH SUCCESS WITH SEER ROCKSOIL

We tried SEER Rocksoil for the first time this year and we are very pleased with the results.

We built a raised bed in the back garden and planted it out as normal – with the planting being a bit later because of the late spring. As the photographs below show, we could not have asked for better crops.

The artichokes are particularly interesting as we tried some of these in the normal garden soil and some in the SEER Rocksoil. In the last photograph the ones at the back are in the normal soil and the ones in-front are in SEER Rocksoil - you can judge the difference for yourselves!

One major bonus, besides the bumper crops, was the lack of weeds unlike conventional topsoils. We don't see how you could go wrong with SEER Rocksoil. I just hope it encourages more folk to start enjoying the results of good gardening especially as it is using this new, growing medium that is peat free – and made from a true, local, recycled product.

Kind regards
Lorna McDiarmid
