## **Making BUILDERS SOIL productive**

We moved to our new house 7 years ago and spent a fortune trying to improve our very poor clay soil to start our own garden. All our attempts brought very little improvement so we thought we would try your product.

**We are now delighted to confirm that this year we have seen a huge improvement in both the growth and quality of the plants in our garden. Here is a photograph taken recently that says it all.**

The fence seen in the photograph is 6 feet high, so that will give you some idea of the plant height!

**Yes, we have no hesitation whatsoever in recommending other new house owners, or gardeners struggling with a poor clay soil, make good use of your SEER Rockdust.** I am sure, that if they get the same results as we did, they will be well satisfied.

Yours sincerely

P and T McQ
