## **POT PALM TREE and an OLD ROSE BUSH burst into life with SEER ROCKDUST**

We run a gardening service company and started using SEER Rockdust in 2006. Here are just two examples of why we think it has an important role to play in good gardening:

**POT PALM TREE:** My husband came home with a small palm in a 4" pot. It struggled away for 4 or 5 years never growing more than one leaf a year. Then last year I gave it a handful of SEER Rockdust and thought "*Well let that work its wonders or you are out.*" **I am happy to say our now healthy palm tree really got the message and has flourished ever since!** In the last year it has gained 4 healthy leaves – and it even put one of these on over the winter period which is unusual.

**OLD ROSE BUSH:** This is in a garden belonging to Stan. A single rose was looking dried up with one leaf sticking out at right angles so we decided, once again as a last chance, to give it a go with SEER Rockdust. The first thing we knew it started throwing out healthy shoots from the root area and since then it has never looked back. **It soon flourished into the vigorous climbing rose it was always meant to be.** Yes, we did add compost and manure – but it had always had that.

**Keep up the good work!**

Pam Marston
