

Angus Liquid Iron Products

A unique range of high quality liquid iron products for use on all sports and non-sports grass surfaces. Iron (Fe) is an important plant nutrient (trace element) because it is crucial for chlorophyll production and therefore enhances leaf colour. All these products used as part of a full nutrition programme will assist

- **promotion of strong healthy grass of good colour**
- **and increase stress tolerance within the plant**

Chelated Iron chelated with EDTA for maximum efficiency, concentrated formula with low application rates; use for deficiency prevention or correction
10% Fe (iron) w/v; 7.7% Fe w/w

Application rates: 5 -10 litres / ha in 300 - 500 litres of water Apply when required

Angus Sea Iron complexed, fast acting formulation giving long lasting green-up for all turf surfaces
6% chelated iron + Mg + S + seaweed Continues to work in low temperatures – rapid uptake – excellent colour

Application rates: 20 - 30 litres / ha in 300 - 500 litres of water Apply throughout the year

Angus FeN™ complexed, non-staining formulation offering quick response and long lasting green-up for all turf surfaces
5% N + 5% Fe (iron) w/w

Application rates: 20 - 40 litres / ha in 300 - 500 litres of water Apply throughout the year

Angus 6 Iron low level, chelated iron (Fe) for affordable, efficient uptake and quick response
6% chelated iron w/v

Application rates: 20 - 40 litres / ha in 300 - 500 litres of water Apply throughout the year

Angus Complexed Iron complexed ferrous Sulphate solution
6% Fe (iron) w/v

Application rates: 20 litres / ha in 400 litres of water Apply during growing season

**Always perform a bucket test to ensure compatibility before tank mixing. Products available in 10, 200 & 1,000 litres containers.*

best quality, best service, best value
