

Turf Care Granular Fertilisers

The Turf Care Range has been specially formulated by Angus Horticulture to give adequate nutrition to all fine turf throughout the growing season. The products in this range are a balanced complex of granules, manufactured for ease of application, keeping plant scorch to a minimum. The product spreads evenly on exposed areas, whilst monthly applications will help reduce plant stress, with the iron ensuring a rich green colour, and the magnesium along with potassium ensuring good cell structure within the plant, allowing maximum chlorophyll production.

All products in this range are 100% homogenous, meaning that all nutrients are in each granule thus ensuring excellent results. A wide range of formulations mean there is a product for every situation, and we can also manufacture bespoke products on request.

- **Mini (1 - 2.5mm) or micro (0.5 - 1.5mm) granules for superb results every time**
- **Homogenous granules for even nutrient distribution**
- **Wide range of products to suit every situation**
