Angus Rock Dust

Angus Rock Dust is based on volcanic minerals that can aid the feeding of soil for the purpose of improving the health and vigour of plants.

For existing lawns and pasture, trees, shrubs, herbaceous borders, bulbs, and fruit trees: first application of 2 kg/m^2 (20 tonnes/ha). Subsequent, annual applications in autumn/winter of 500 g/m^2 (5 tonnes/ha). Apply to soil surface and top dress with organic mulch. (NB: Use with care on lawns as sand/grit particles may damage cylinder mowers).

For vegetable gardens [all crops]: first application of 3 kg/m2 (30 tonnes/ha). Subsequent, annual applications in autumn/winter of 1 kg/m2 (10 tonnes/ha). Apply to soil surface, but if you are digging then we recommend doubling the rate of use and incorporating to a depth of up to 300 mm.

Preparation for laying of turf or sowing grass seed for lawns or pasture: Sprinkle 2kg/m^2 (20 tonnes/ha) to the soil and rake in to the surface.

For other applications, please consult our additional instructions for use.

Store in a cool, dry and well-ventilated area. Keep in the original packaging. Do not eat, drink or smoke when using this product. Wash hands thoroughly after handling. Wear suitable protective gloves, goggles and clothing. Keep out of reach of children. Avoid generating or breathing dust.
